

Jordan Michael Calhoun

Full-Stack Software Developer

(318) 470-7969 · jordanmercalhoun@gmail.com · flt-sudo.github.io · github.com/flt-sudo · airmarshallsorporate.com · tryflytline.com

SKILLS

- **Languages:** TypeScript, JavaScript, SQL, Bash
- **Stack:** Next.js 16 (App Router), React 19, Supabase / PostgreSQL with Row-Level Security, Edge Functions, Zod, Tailwind, Vercel, GitHub Actions CI, Capacitor iOS
- **AI:** Anthropic Claude API, MCP servers, forced-tool schema output, vision extraction, eval harnesses, prompt-injection containment
- **Security:** threat modeling, remediation with CI regression tests, supply-chain gating (npm audit, gitleaks)
- **Integrations:** Twilio SMS (TCPA-gated), Stripe, REST / webhooks

EXPERIENCE

Engineer, sole developer

Air Marshalls Environmental Consultants | 2024–Present

Operations portal for a multi-branch inspection franchise (airmarshallsorporate.com), 195 PRs merged in 100 days.

- Built the lead-to-job pipeline and the chain-of-custody forms the field staff use.
- Enforced a 4-tier role hierarchy (HQ to technician) in 68 PostgreSQL row-level security policies across 32 tables.
- Cut lab-report drafting from most of a working day to about 51 seconds, measured across 147 in-app generations.
- Added a human verify-gate: every Claude-extracted lab value is confirmed before the report generates.
- Wrote 7 static CI guard tests that fail the build if anyone adds an ungoverned AI route or renders model output as HTML.
- Ran a security review of the live system: 9 findings, including prompt injection, SSRF, broken authorization, webhook replay, and AI cost abuse. Each was fixed and locked with a CI regression test.
- Added a supply-chain gate to CI (dependency audit and secret scan) and upgraded production to Next.js 16 and React 19, cutting known-vulnerable dependencies from 12 to 0.
- Built the append-only event log and Insights dashboard that tracked field photo uploads growing from 4 to 1,173 per month.

Founder & Engineer

Flytline | 2024–Present

Multi-tenant SaaS for flight schools (tryflytline.com).

- Built 96 TypeScript modules. Row-level security (53 policies across 20 tables) keeps each school's data separate.
- Wrote the matcher that pairs cancelled lesson slots with waitlisted students. Same inputs always give the same result, and every match can be audited.
- Built the TCPA-compliant SMS flow: consent capture, quiet-hours windows, STOP handling, delivery webhooks.
- The core product runs without the model. If the Claude API goes down, only convenience features degrade.
- All 6 LLM features follow a written eval standard kept in the repo.
- A live eval against the real API checks that the model leaves a missing email blank instead of making one up.

Private Pilot

Skyborne Airline Academy | October 2025

- FAA Private Pilot Certificate, airplane single-engine land.
- 207 hours logged (99 PIC, 52 cross-country); instrument rating in progress, 50 approaches flown.

OPEN SOURCE

gmail-mcp-server · MCP server that gives AI assistants access to multiple Gmail accounts, each at its own permission level (read, modify, send). Stdio and HTTP transports with bearer auth, Docker, 35 unit tests, CI with a secret scan. github.com/flt-sudo/gmail-mcp-server

cachelens · static analyzer that flags prompt-cache-defeating patterns in LLM code and attributes them to dollar cost. 22 tests; scans 300 files in about 215 ms.

EDUCATION

- B.S. Aviation Science & Management, Middle Georgia State University (in progress)
