

Jordan Calhoun

Full-Stack Builder & Solutions Engineer — turning messy business workflows into shipped, role-based SaaS

jordanmercalhoun@gmail.com · GitHub: github.com/flt-sudo · Portfolio: [add link] · [City, ST]

SUMMARY

Full-stack builder who ships production SaaS that turns messy, real-world operations into structured software. I design and deploy multi-tenant, role-based portals (one live in production), lead-capture-to-fulfillment pipelines, payment and document-generation flows, and compliant SMS/email automation with Next.js, React, TypeScript, Supabase/Postgres, and Stripe. I work the full loop — workflow discovery, demo, deployment — which maps directly to GTM engineering, solutions/implementation, and technical customer success.

CORE SKILLS

Product & Workflow: process-to-software design · RBAC & multi-tenancy · lead→job pipelines · onboarding/invite flows · PDF/document generation · dashboards & reporting **Full-Stack:** TypeScript/JavaScript · React 18/19 · Next.js (App Router) · Node.js · Tailwind · Postgres schema design **Backend & Data:** Supabase (Postgres, Auth, Edge Functions) · Row-Level Security policy design · migrations · service-role patterns **Integrations & Automation:** Stripe (payment links, webhooks) · Twilio SMS (consent/quiet-hours/rate-limit/audit) · Resend · Capacitor/iOS · GitHub Actions CI · Vercel **GTM / Solutions:** branded demo builds · proposal & pricing scaffolding · instrumented funnels & conversion tracking · technical onboarding · productized delivery pipelines **AI-adjacent:** wiring AI-assisted features into real workflows · LLM prompt-cache cost analysis tooling · AI-drafted document foundations with provenance tracking

SELECTED PROJECTS

Air Marshalls — Production Franchise Operations Portal · *live: airmarshallscorporate.com*

Next.js 14 · React · Supabase (Postgres/Auth/Edge Functions) · Vercel · Capacitor/iOS · GitHub Actions

- Designed and shipped a **live, multi-tenant operations portal** for a multi-branch services franchise, with a 4-tier role hierarchy (HQ → regional → branch manager → technician) enforced at the database layer.
- Built a **public lead-intake** → **job-conversion pipeline**: validated public form (honeypot + CAPTCHA), service-role insert, branch routing, and lead status tracking through to scheduled jobs.
- Implemented **digital chain-of-custody forms** with multi-sample capture, signature capture, and auto-generated collision-resistant document numbers.
- Secured **14 RLS-protected tables** with a privilege-escalation guard and Edge Functions for invite/role/password management; added 6 acceptance/RLS test suites and CI on every push.
- Wrapped the portal in a **Capacitor iOS shell** and authored a repeatable 30–45 min end-to-end deploy guide.

Flytline — Multi-Tenant Scheduling & Recovery SaaS · *MVP*

Next.js 16 · React 19 · TypeScript · Supabase/Postgres · Twilio

- Built a multi-tenant SaaS that detects scheduling cancellations and **automatically matches replacements** via a rules-and-scoring engine (hard eligibility filters + soft preference scoring + timed retry windows).
- Designed an **11-table multi-tenant schema with ~80 Row-Level Security policies** across 4 roles, isolating every tenant at the database layer.
- Implemented **TCPA-compliant SMS automation** — consent checks, quiet-hours, per-user rate limiting, and a full audit trail.
- Built operator dashboards quantifying business impact (match rate, time-to-rebook, revenue recovered).

site-portal-starter — Productized SaaS Delivery Engine

Next.js · Supabase · Vercel · Node scaffolding

- Productized a reusable "marketing site + internal portal + lead pipeline" engine deployed per-client as a single app — turning bespoke builds into a **repeatable delivery system**.
- Wrote a **zero-dependency new-client scaffolding script** that spins up a branded demo branch, patches brand config, and generates proposal + market-research docs in one command.
- Documented and ran a full **GTM motion** — qualify → research → priced proposal → branded demo → ship.

Additional Builds

- mosaic-eligible** — deterministic FAA aircraft-eligibility verdict engine (49-record catalog, fuzzy search, liability-aware "VERIFY" states, Stripe payment link, SEO static pages).

- **plugready** — regulated compliance-training SaaS with server-side **PDF certificate generation**, **QR verification**, **Stripe webhooks**, and RLS multi-tenancy.
 - **markwatch** — live deadline-monitor wedge with an **instrumented conversion funnel** (free calculator → paid) and event tracking.
 - **cachelens** — open-source static analyzer that flags LLM prompt-cache-defeating patterns and **attributes them to dollar cost** (22 tests; scans 300 files in ~215ms).
